Listing of Claims:

Claim 1. (Previously presented) A method of making a multi-layered dental device, comprising the steps of: shaping a first wax-like polymerizable dental material, said first material being dimensionally stable in its uncured state at ambient temperature and comprising a mixture of monomer, oligomer, and light sensitizer and optionally including reinforcing filler, to form a first portion of a polymerizable dental device, shaping a second wax-like polymerizable dental material, said second material being dimensionally stable in its uncured state at ambient temperature and comprising a mixture of monomer, oligomer, and light sensitizer and optionally including reinforcing filler, to form a second portion of said polymerizable dental device, and polymerizing said first and second dental materials by light-curing after both materials have been applied to form a multi-layered dental device having a polymeric matrix, which alone, has a flexural modulus of at least 250,000 psi and a flexural strength of at least 5,000 psi.

Claim 2. (Original) The method of claim 1 wherein said first wax-like polymerizable dental material has a first flowable temperature, said second wax-like polymerizable dental material has a second flowable temperature, and said first flowable temperature, is effectively higher than said second flowable temperature.

Claim 3. (Original) The method of claim 1 wherein said polymerizable dental device is selected from the group consisting of artificial tooth, bridge, full denture, and partial denture.

Claim 4. (Canceled)

Claim 5. (Canceled)

Claim 6. (Original) The method of claim 1 wherein said first wax-like polymerizable dental material is shaped into a tooth enamel.

Claim 7. (Previously presented) The method of claim 1 wherein at least one of said first and said second wax-like polymerizable dental material comprises reinforcing filler.

Claims 8-21. (Canceled)
